

Replacing the Water Sharing Plan for the Lachlan Unregulated River Water Sources 2012

The Water Sharing Plan for the Lachlan Unregulated River Water Sources 2025 will replace the previous 2012 plan. This document answers frequently asked questions about proposed changes to the plan.

What is a water sharing plan?

Water sharing plans are statutory plans made under the *NSW Water Management Act 2000* (WM Act). The rules in the plans allow equitable sharing of water for all water uses, including the environment. The plans have a statutory timeframe of 10 years. The purpose of a water sharing plan is to:

- provide water users with a clear picture of when and how water will be available for extraction
- protect the fundamental environmental health of water sources
- ensure our water sources are sustainably managed in the long term.

The plans clearly define the rules for sharing in the available water in a water source. They also provide irrigators and farmers with continuing or 'perpetual' licences that have a title separate from the land, enabling better water trading opportunities. In addition, plans set out requirements for basic landholder rights – domestic and stock rights, harvestable rights and native title rights.

Water sharing plans support the long-term health of rivers and aquifers by making water available specifically for the environment.

Why is the Lachlan Unregulated water sharing plan plan being replaced?

NSW water sharing plans are valid for 10 years and are subject to a review by the NSW Natural Resources Commission (the NRC). The responsible minister may extend or replace a plan on consideration of the recommendation of the commission.

In 2023, the NRC completed its review of the *Water Sharing Plan for the Lachlan Unregulated River Water Sources 2012* (the 2012 plan) and recommended the 2012 plan be replaced. The department

has prepared a draft replacement plan for consultation – the draft *Water Sharing Plan for the Lachlan Unregulated River Water Sources 2025* (the draft plan).

The draft plan includes changes recommended by the NRC.

How will the department consult on the replacement water sharing plan?

Stakeholder input is critical to the development of water sharing plans in NSW. We are consulting the community through:

- public information and consultation webinar session
- face-to-face community sessions
- one-on-one sessions on request
- public submissions.

The draft plan will be on public exhibition from **11 November 2024 to 20 December 2024**.

You can have your say by attending the virtual meeting on **28 November 2024** and completing the submission form available from the department's website. Face-to-face meetings are being held in Crookwell and Cowra on **3 and 4 December** for stakeholders to discuss the proposed changes with department staff, share local knowledge and provide feedback as part of the community consultation process.

Is there a limit on how much water I can take with my licence?

Water Access Licences show the amount of entitlement that you have – called the share component. This share component can be expressed as ML/year or a number of 'unit shares' in the available water resource. The amount of water you can take is based on your licensed share component, the available water determination (AWD) and your account management rules and any relevant conditions on your access licence.

An AWD is made at least on 1 July each year. The AWD sets out a volume of water per share that will be placed into your water allocation account at the start of a water year (1 July) or a percentage of the entitlement volume if share component is in ML/year. This is called an allocation. You can only take the volume of water that is in your water account, in accordance with the rules in the water sharing plan and any relevant conditions on your access licence and linked water supply work approval(s).

Are changes proposed to rules governing when I can take water?

There are proposed changes to access rules in the following water sources:

- Crookwell River

- Lachlan River above Reids Flat
- Mandagery Creek.

There are also proposed changes to access rules for extraction from Lake Waljeers in the Unregulated Effluent Creeks Water Source.

We have included licences that are subject to specific cease to take conditions in a schedule in the draft replacement plan. These were listed in an Appendix in the 2012 plan.

Access rules do not apply to take under basic landholder rights. For more information about when you can take water and when you can not, go to the report cards for the draft plan on the [department's website](#).

Are changes proposed to rules governing the trade of licence shares or water allocations?

There are changes proposed to trade rules for water shares (permanent trade) and allocations (temporary trade) in the following water sources:

- Gunningbland and Yarrabandai
- Humbug Creek
- Lake Forbes and Back Yamma Creek
- Mount Hope Area.

For more information about these changes, go to the Proposed changes fact sheet and the report cards on the [department's website](#).

Does the draft plan propose changes to the estimated water requirements for basic landholder rights and licensed take?

We have updated the estimated water requirements for basic landholder rights. We have also updated the total volumes or unit shares specified in the share components of all access licences to reflect current information.

We have listed separately the volumes of domestic and stock (subcategory 'town water supply') access licences.

How can I obtain a licence or additional water for a commercial enterprise?

New or additional licence shares or allocations may be acquired through the water market. The plan establishes rules governing buying and selling shares and allocations within and between water sources.

More information

The draft plan and other fact sheets are available on the [department's Water website](#).
