

# Which logbook template should I use?

## Water sharing plans and logbook requirements

When water is taken under an access licence or water supply work approval, water sharing plan rules may require that specific information is recorded in a written hard copy or electronic form called a logbook.

Logbook requirements are implemented through conditions on access licences and approvals.

## Logbook templates

Logbook conditions vary across different water sharing plan areas.

The department has developed different logbook templates for different water sharing plan areas.

If you choose to use a logbook template, check the table below to find out which logbook template to use based on the water sharing plan which applies to your access licence or water supply work approval.

## Logbooks are being replaced by new recording requirements

Logbook conditions are being progressively replaced by new metering rules which include new recording and reporting requirements.

The new metering rules are being rolled out in stages until December 2024. The table below lists the water sharing plan areas where logbook conditions have been replaced by the new rules.
